## File Organization

- Project
  - *cogo*: Point data Access database(.mdb)
  - *dwg*: Associated drawing files
  - *survey*: Raw field data
  - *dtm*: Surfaces
  - *Additional folders (align, lots, er, pipewks)*

---

---

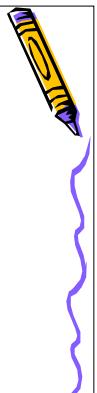

---

---

---

## Points

- Can be searched grouped and have associated data
- Points have
  - Names
  - Elevation
  - Markers, text
  - Points can be “grip edited”
  - Point description: description key
  - Points can be specified N/E E/N or x y or y x

---

---

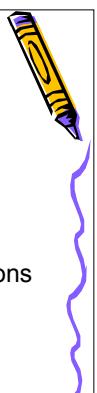

---

---

---

## Coordinate Systems

- Standard coordinate systems used
  - NAD27, NAD83
- Coordinates converted using the Nadcon algorithm
- Land Desktop allows easy conversions between datums

---

---

---

---

---

## Prototypes

- Prototypes are like Templates
- Data files: allows setting of specific styles e.g. line label style
- Data files: Styles that are saved as part of other projects can be imported into prototypes
